

## **Rodent Prevention Tips for your Home or Business**

It is common to have rodent issues during the fall and winter due to rodents looking for warm long-term housing.

Climate controlled buildings are very attractive for nesting purposes and finding food and water sources. To help prevent large scale rodent issues in your home or business please follow these helpful tips.

- Close all exterior and interior doors as you enter and exit.
- Clean your dishes as you go please don't leave them on the sink or counter.
- Store opened food in sealed containers with tight-fitting lids and store as much food in your refrigerator as you can.
- Immediately cleanup any spills and remove unnecessary food sources.
- Store and dispose of trash properly in your home and business and discard in trash chutes or dumpsters appropriately.
- Keep enough pet food out as they will eat during the day while storing your pet food in airtight containers as well.
- Please refrain from feeding the birds or wildlife with bird seed or other food sources.
- Practice good housekeeping and sanitary awareness in your home or business by reducing clutter and unwanted materials and regular cleaning.
- Report unsanitary conditions you may observe at the community or business to the management company immediately.
